

INTERNATIONAL
LIFT & ESCALATOR
CONSULTANTS

A low-angle photograph of several modern skyscrapers reaching towards a clear, light blue sky. The buildings are characterized by their repetitive window patterns and sharp, angular lines. The sun is visible as a bright, glowing orb behind one of the buildings, creating a lens flare effect. The overall composition emphasizes the height and scale of the architecture.

ILECS Consultancy Services

Consultancy is now a recognised business strategy within British industry and commerce. As established Lift and Escalator Consultants, our aim is to support your business needs by providing sound professional advice on the following areas:-

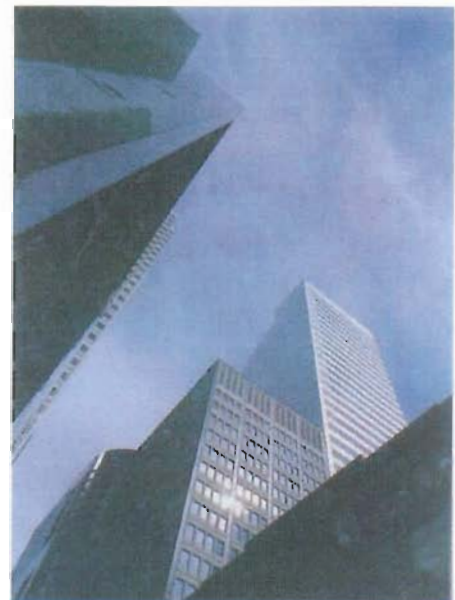

Legislative issues relating to EN81-80 (H&S) EN81-70 (DDA) & Risk Assessment
Traffic analysis and Lift and Escalator design information for new buildings.
Specifying and tendering for the modernisation of existing Lifts and Escalators
Project management, Health & Safety plans and CDM Coordinator where required.
Practical Advice on formulating and instigating Maintenance Contracts.
Overseeing the Contract Administration of existing Maintenance Contracts.
Impartial professional advice and professional witness.
Site visits for Risk Assessments, Condition Surveys and Maintenance Audits.

ILECS Limited (International Lift and Escalator Consultants) have built an established reputation over several years, with a number of blue chip companies. Our aim is to provide the expertise for you to achieve your business goals, which will allow your more time to concentrate on other areas of development.

Our main office is located in Manningtree in Essex; however, we also have satellite offices in London, the South West and the Midlands. Strategically we have a strong presence in London and the South, which is reflected in our client base. However, we manage projects throughout the UK, including Scotland, the North East, the North West, the Midlands and Wales.

All our staff come from within the industry and have practical and analytical skills. Our offices are linked via our own independent main 'Server' and we also have dedicated E-mail address which can be accessed by senior members of staff at all times.

Our Web Site provides up to date information and can also be used as a management tool to store equipment details specific to your own portfolio. We can input your lift and escalator details on to our secure web site and arrange for your company to have a dedicated pass work for securer access at any time.

Lift and Escalator Design

Lift and Escalator system design should be developed to achieve individual business objectives and manage the movement of passenger, goods and support services including vehicle transportation and fire lifts. This should be carried out in accordance with detailed traffic analysis, industry standards and coding.

Lift and Escalator Modernisation and Installation

The ability to keep up with increasing legislation is an ongoing requirement. ILECS Limited encourages the incorporation of all items relating to EN81-80 and EN81-70. However for lifts and escalators that are ageing, we also recommend that careful consideration be given to equipment that can be purchased in the UK to ensure long term reliability of parts by any competent service provider.

ILECS Limited prepares tenders and specifications to meet design team requirements, budgetary plans and achieve performance criteria for new and modernisation work.

Our role includes:

- The preparation and distribution of the tender and specification to selected companies.
- Tender analyses with recommendations for placement of the order.
- Provisions for monitoring site progress and witnessing the final site test.

Project Management

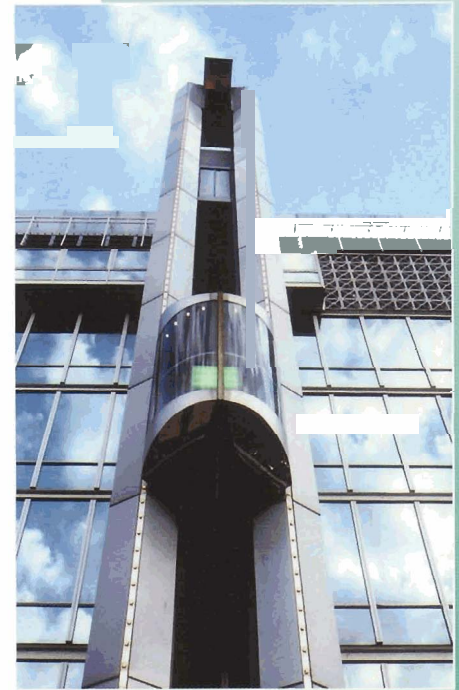

ILECS Limited provides a complete project management service for all types of new and modernisation contracts in order to achieve the agreed programmes and adhere to strict cost control.

In conclusion, ILECS Limited witness tests the works to ensure satisfactory completion of the contract. For existing properties, ILECS Limited undertakes site visits to assess project constraints including access, storage, crange and health and safety risks associated with the project. This kind of proactive design stage planning is essential to achieve effective cost control of the works, maintenance, repairs and long-term usage.

CDM Co-ordination

ILECS Limited will assist and advise you regarding your duties when appointed to act as CDM Co-ordinator in accordance with the Construction (Design and Management) Regulations 2007 on a project.

We will assist with planning the works and advise you on health and safety matters relating to all aspects of the project, whilst preparing and issuing any necessary documentation for tendering and consolidating the information at the end of the project.

Surveys

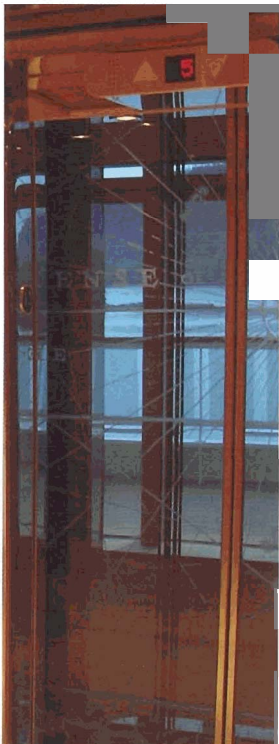

Condition Surveys

A lift or escalator that is continually breaking down or causing concern could be affected by the poor condition of the equipment, be the result of inadequate servicing or be a combination of both. To establish an independent view on what is required, ILECS Limited provides detailed surveys of all types of lifts and escalators covering:

- Comments on areas relating to 'Health and Safety' and EN81-80
- Comments on areas relating to DDA part 3 and EN81-70
- Review of equipment and advise on its age, condition and estimated working life
- Establishing if the lift is 'Fit for Purpose' and advising on the design performance
- Comments on the regularity of the service visits and general housekeeping levels
- Providing budget costs for all works identified for modernisation or upgrading

Lift Maintenance Audits

During the annual site visit and audit, evaluation and constructive comment on the standards of lift performance and maintenance at site are recorded and subsequently reported back to the client. When combined with Lift Administration Plus, ILECS Limited can resolve any issues arising with the service provider to ensure a safe, reliable lift.

Risk Assessments

ILECS Limited carries out risk assessments on all types of lifts and escalators, as required by The Management of Health and Work Regulations, 1999 and EN81-80 Rules for the Improvement of Existing Lifts.

EN81-80 is a European Standard aimed at reducing the risks and improving the health and safety of lifts predating the 1998 Lift Regulation, (which does not cover all health and safety aspects under British Law) and escalators. Whilst EN81-80 is not mandatory in the UK, it does provide a benchmark when considering the risks associated with: using, installing, maintaining and inspecting lifts.

The assessments identify hazards for all users including maintenance engineers and insurance inspectors. Hazards are identified, the level of risk is evaluated and control measures are recommended to reduce risk.

Contract Administration

ILECS aims to help property managers, buildings owners and facility managers understand and deal with the legislative, technical and economic issues relating to lifts and escalators. We provide a full range of contract administrative support all available to view on our new online service, OneVISION.

An administration facility which ILECS has developed to place all the important information about our clients' lift facilities available at their fingertips, 24 hours a day, 7 days a week. It gives instant access, via our website www.liftconsultants.co.uk, to all important documents relating to lift regulations and maintenance as well as detailed technical information.

OneVISION also provides contact details for maintenance companies, insurance providers, administrators and building managers. A 'one stop information shop' for all your lift and escalator needs.

A free trial of OneVISION is available upon request.

Lift Administration

ILECS Limited works closely with each client, receiving all correspondence and reports associated with the lifts and escalators, returning advice and recommending answers that enable the appropriate economical and practical solution.

We aim to reduce costs associated with maintenance, call outs and repairs over the course of a year.

Lift Administration Plus

This service controls management of lift maintenance and all associated reports and correspondence. We work directly with the contractors, keeping the client fully informed of all actions taken in support of their lift service.

Maintenance Contracts

There are advantages to operating maintenance services using a contract tailored to the individual client's requirements. Many lift contractors tend to offer global contracts that suit their own criteria and have a bias towards their own business plans.

ILECS Limited offers a bespoke contract document that is agreed with the customer and tenders for these requirements across a broad section of the market. This ensures services are tailored to meet the building operation at the most efficient cost.

We are delighted to introduce our updated website at www.liftconsultants.co.uk.

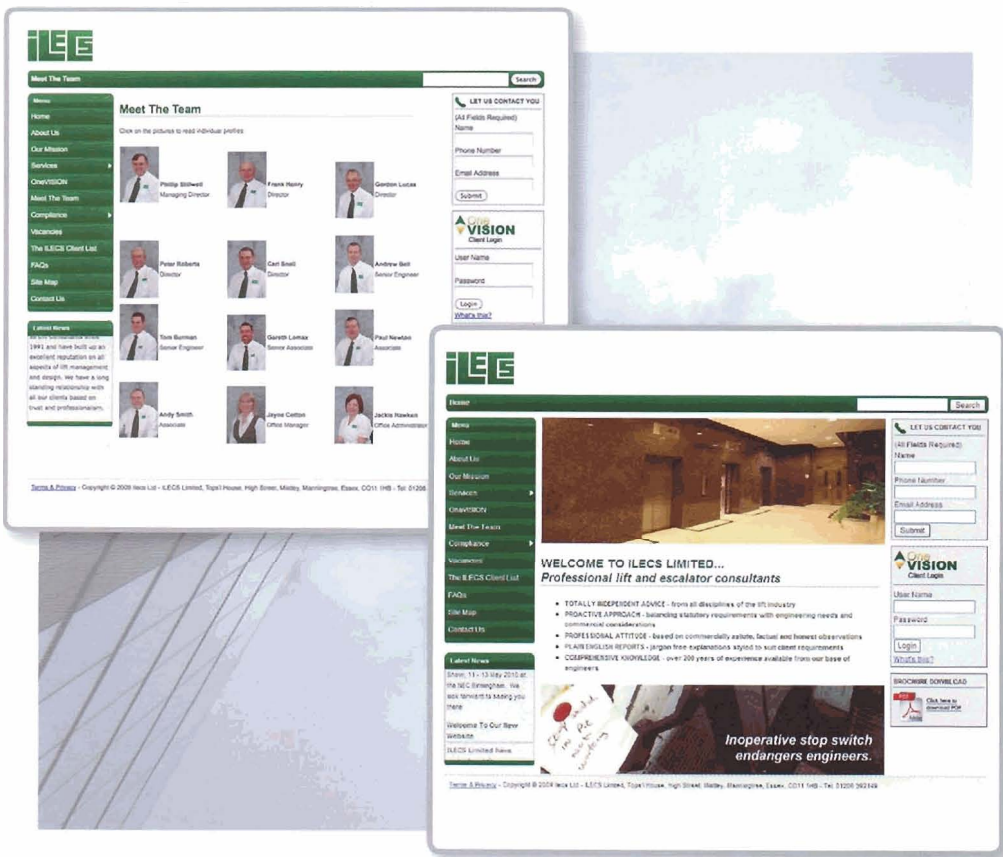

Research has shown that an increasing number of new and existing customers use the internet to keep in touch with their service providers and to access the most current industry information.

Our website has been designed with this in mind, in addition to servicing the demand for fast and effective solutions.

Time is valuable to business decision makers. The website answers the need for quick and easy access to concise industry information. Invaluable news and data is now only two or three clicks away.

It also features regular updates on services and standards; literature downloads; easy event registration and contact information. Critically, the site also contains areas dedicated to individual participating customers with a direct link to our OneVISION facility.

A fresh approach to service delivery; a new look for the future, a crucial and informative read.
